2013

Project mgt learnerships turned into ED Agri that plant and supply fresh produce in key communities.

2020 onwards

Project Management learnerships in N10 and R27 towns.

2017- 2019

VTOL (vertical take off and landing)

VTOL is our IP signature

Definition: VTOL in aircraft is the result of an unusual direction of jet thrust downward through the nozzle which converts it from horizontal to vertical, so the aircraft do not move forward but gain height, in order to fly.

VTOL (vertical take off and landing)

When is VTOL relevant?

VTOL can be **life saving** as a **solution** in **times of trouble when :**

- Time has run out for alternative options
- An aircraft's take off and landing space has been sabotaged or
- The environment and circumstances is not conducive to a more sophisticated solution e.g. in a jungle or on the open sea on a ship.

VTOL (vertical take off and landing)

VTOL can be life-saving

It is about inclusive, socio-economic structural solutions for clients

- Providing simple, flexible, development interventions and school support for youth and lower income job category participation and their children, so whole communities can stabilise.
- Employer tax flow enhanced

VTOL (vertical take off and landing)

VTOL in 2020

It involves -

- Prayer,
- Neuroscience measurement to accurately stream youth into agricultural projects for seed garden tilling, processing and local trading projects
- Building a survival trajectory for employers, stakeholders and local communities.
